

Contents

Introduction	1
<i>The Main drivers behind the huge increase in ice-class interest</i>	
Northern Seas	2
<i>An area rich in oil and gas</i>	
The Challenges Ahead	3
<i>Class Societies invest in R&D</i>	
Ice Effects	5
<i>Causes of potential damage when sailing in ice</i>	
Class Society Notations	7
<i>New Rules and Guidelines have been introduced, including 'winterisation' and 'de-ice'</i>	
Implications of Ice Operations	9
<i>Stability and Safety can be compromised by icing</i>	
Uniform Requirements	10
<i>IACS has developed uniform standards for vessels trading in Polar regions</i>	
Double Acting Concept	11
<i>Double acting technology the way ahead in heavy ice conditions</i>	
Propulsion	14
<i>Diesel-electric prime movers prove favourite</i>	
Coatings	19
<i>The correct outer hull and internal tank coatings are imperative</i>	
Ship Design	21
<i>Stena Bulk continues with its innovative MAX concept</i>	
Arctic LNGCs	23
<i>Many challenges ahead, especially in Northern Seas</i>	
Crew Shortages	26
<i>Skilled crew required</i>	
Arctic Operational Platform (ARCOP)	28
<i>A look at the findings published by ARCOP</i>
